

Read This First

This kit includes a floppy-disk patch release of the TMS320C8x emulator software. This release supports TMS320C82 silicon version 1.0. *If you have an update kit and have previously installed the TMS320C8x emulator software, skip to step 3.*

- 1) On your hard disk, create a directory named `tools_dir\mvp\emu`:

```
MD C:\tools_dir\MVP\EMU ②
```

(Note that `tools_dir` is the pathname that you provide.)

- 2) Insert the TMS320C8x Emulator CD-ROM into the drive and copy the files to your hard drive (replace D with the name of your CD-ROM drive):

```
XCOPY /S /E /V D:\*.* C:\tools_dir\MVP\EMU ②
```

- 3) Insert the TMS320C8x PC C Source Debugger update disk into the floppy drive and copy the files to your hard drive (replace A with the name of your floppy drive).

```
XCOPY /S /E /V A:\*.* C:\tools_dir\MVP\EMU ②
```

- 4) Execute the `regdrv` program and register the emulator device driver:

```
REGDRV ②
```

If you have previously registered the emulator driver, you must unregister it before registering the new driver. The `regdrv` program takes you through the installation process step-by-step.

- 5) If you are installing the emulator for the first time, follow the rest of the installation instructions in the *TMS320C8x Emulator Installation Guide*.
